

A9-AUTO

Product Brief

DDR5 Reset Automation Kit

The A9-AUTO Reset Automation Kit is an upgrade kit for the Astek CTC2 test fixture and enables automated testing of DIMM and component test cards used on the CTC2. The Reset Automation Kit replaces the standard Power Adapter boards on the CTC2 with additional features. The Reset Automation Kit includes sixteen (16) SMP cables that can be used as low-speed, general purpose outputs. The SMP cables can be connected to Reset, Chip Select, and Command/Address signals on the CTC2 to automatically perform reset sequencing of a DIMM or component test card. The Reset Automation Kit is controlled via the USB port on the CTC2 and is controlled with the same DDR5 Controller software that comes with the CTC2 board.

Features

- One Test Card Power Adapter board
- One DIMM Power Adapter board
- Smart Power Adapter cable with 16 SMP connections
- Supported by existing DDR5 Controller software available with the CTC2 Test Fixture
